

Weather Now App

Description:

Weather Now App is a responsive React app that lets users search any city and instantly view real-time weather details like temperature, wind speed, and conditions using the Open-Meteo API.

Tools Used:

- React
- TailwindCSS
- Open-Meteo API
- Open-Meteo Geocoding API
- shadcn/ui

Features:

- Search any city to get current weather
- Displays temperature, wind speed, and sky conditions
- Responsive, clean, and user-friendly UI
- Error handling for invalid city or network issues

How it Works:

1. User enters a city name.
2. App fetches city coordinates using the Open-Meteo Geocoding API.
3. Current weather is fetched from the Open-Meteo API.
4. Weather details are displayed in a clean card layout.

Optional Enhancements:

- Temperature unit toggle (°C / °F)
- Weather icons for better visualization
- Loading skeleton for improved UX
